

SNOCLASS : A Belgian terminology project for mapping relevant SNOMED CT concepts to WHO Family of Classifications in 3 domains

Selecting relevant SNOMED CT concepts to
consider for mapping to
three classifications
using hierarchy (semantic) tags

Robert Vander Stichele, Joseph Roumier

Department of Public Health and Primary Care, Ghent University, Belgium

Funded by the Belgian Federal Public Service (FPS) Health, Food Chain Safety and Environment
National Release Centre for Terminology, SNOMED CT EXPO, Antwerp, October 24, 2025

Conflict of interest statement

No conflict of interest for both presenters

Overview

Problem statement and aim of the project

Presentation of the project team

Introduction on mapping ; from what to what ?

Description of the 3 classifications

Methodological approach and preliminary results

Timeframe for further work

Problem statement

**How can SNOMED CT be implemented
with the support of the clinicians
by respecting the existence of the classifications
in their relevant domains?**

Aim of the project

- To explore the appropriate way to map a reference terminology (SNOMED CT) to 3 specific domain classifications (ICPC-3, ICHI, ICF)
- To provide a significant sample of matched SCT concepts for each of the 3 domains in a standardized format
- To estimate the effort to complete the task

Presentation of the project team

(Ghent University, Faculty of Medicine and Health Sciences)

For the International Classification of Primary Care (ICPC-3)

Unit of Primary Care, Department of Public Health and Primary Care

Oliver Van Hecke, Diego Schrans, Victor Maes

WHO Collaborating Centre for Primary Care and Family Medicine

Bianca De Sá e Silva, Jan De Maeseneer

For the International Classification of Health Interventions (ICHI)

Unit of Medical Informatics and Statistics,

Department of Public Health and Primary Care

Pascal Coorevits, Filip Ameye

For the International Classification of Functioning, Disability, and Health (ICF)

Research Unit for Occupational Therapy

Dominique Van de Velde, Ellen Cruyt, Stijn De Baets

Coordination

Robert Vander Stichele, senior research coordinator
Joseph Roumier, IT and semantic web support

Introduction to the mapping approach in this project

Directionality

(370.932 concepts)

ICF (1.587 codes)

ICPC-3 (1.623 codes)

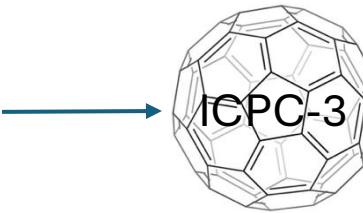

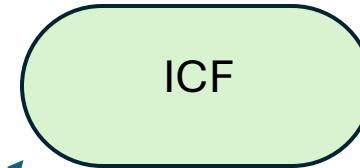

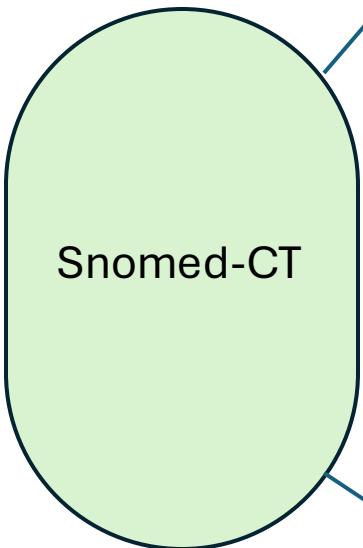

ICHI (5.338 codes*)

*Interventions on Body Systems or functions

Mapping between conceptual systems

Classifications

Reference Terminology

Language-independent maps

Difference between a reference terminology and a classification

SNOMED CT

A reference terminology for clinical practice

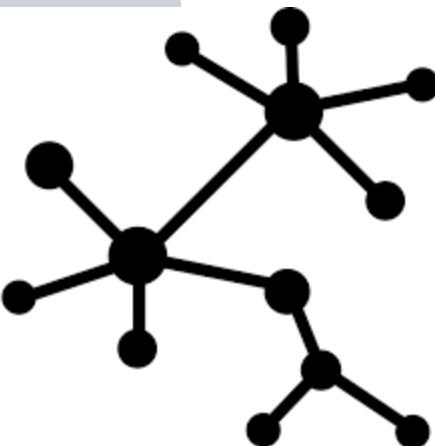

Comprehensive : 370.000+ medical concepts

Poly-hierarchy

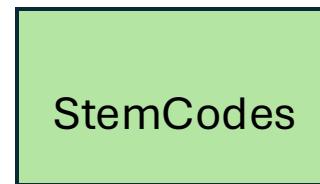

Strong ontological structuring

Classification

- Much smaller
- Mutual exclusiveness and exhaustiveness
- Simple taxonomic structure
- StemCodes
 - Inclusions

Inclusions

Description of the 3 classifications

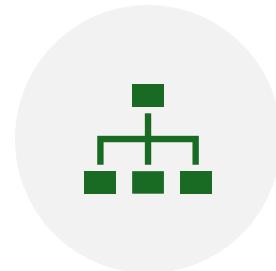

ICPC-3 Classification

Fourteen chapters represent the localization of the problem and / or disease on a body or body-system level, the **Chapters B to W**

S for Symptoms, Complaints and abnormal findings

Chapters A to W are subdivided into two Components: **S and D**

D for Diagnoses and Diseases

| | | |
|---|---|--|
| Legend Symptoms Clinical Finding Complaint Infection Neoplasm Trauma Congenital Other diagnosis Process | AP80 Asymptomatic carrier | AD25 Malignancy |
| | AP80.00 Carrier of chromosome disorder | AD26 Other, not elsewhere classified |
| | AP80.01 Hepatitis B carrier | AD35 Multiple birth |
| | AP80.02 Carrier, risk for environment or children | AD36 Other specified |
| | AP80.03 Carrier, risk for him-, or herself | AD37 Secondary effect |
| | AP80.04 Carrier of G6PD | AD40 Poisoning by chemical |
| | AP80.05 Carrier of sickle cell | AD41 Adverse effect, not elsewhere classified |
| | AP80.06 Carrier of thalassemia | AD41.00 Drug allergy |

ICHI classification

The screenshot shows the ICHI classification interface. The search bar at the top contains the term 'appendicect'. The main navigation menu includes Home, Foundation, Coding Tool, Proposals, and Info. The Foundation URI is listed as <http://id.who.int/icd/entity/944529697>. The left sidebar shows the ICHI classification structure, with 'Health interventions' expanded to show categories like 'Interventions on body systems or functions' and 'Interventions on the digestive system'. The right panel displays the details for 'KBO.JK.AA Appendicectomy', including its parent category 'Interventions on appendix', inclusions (Appendectomy with drainage of appendiceal abscess, Other incidental appendectomy), all index terms (Appendectomy, Appendectomy, NOS, Appendectomy with drainage of appendiceal abscess, Other incidental appendectomy), and the ICHI Axes (Target: KBO Appendix, Action: JK Excision, total, Means: AA Open approach). A red box highlights the Foundation URI, the 'KBO.JK.AA Appendicectomy' title, and the ICHI Axes section. A blue arrow points to the ICHI Axes section with the label 'Tri-axial system'.

Mapping approach

Taxonomy of valid matchings from SNOMED CT to classifications (ICHI, ICF, ICPC-3)

First selection of relevant SCT codes for each classification by choosing the relevant SemanticTags

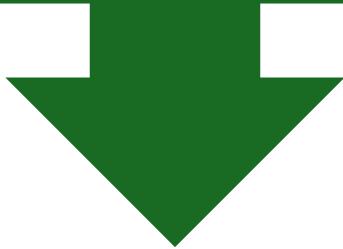

Experts from the 3 domains selected from the 19 SCT SemanticTags the relevant tags for each domain.

Note: SemanticTags have no definition.

They alleviate ambiguity for concepts with identical FSN.

Selecting SCT concepts relevant for the domains

Starting point: 370.931 active SCT concepts

Selection of potentially relevant concepts by
SemanticTags per domain

ICHI: (procedure)
and (regime/therapy)
→ 59.313 (~16%)

ICF: many → 196.867
(or 200.358) (~53%)

ICPC-3: many →
258.926 (or 263.096)
(~70%)

Further selection of relevant SCT concepts per domain by choosing a core sample for this project

ICPC-3

- **Belgian Bilingual Biclassified Thesaurus to SCT Project**
- **4.160** SCT concepts

ICF

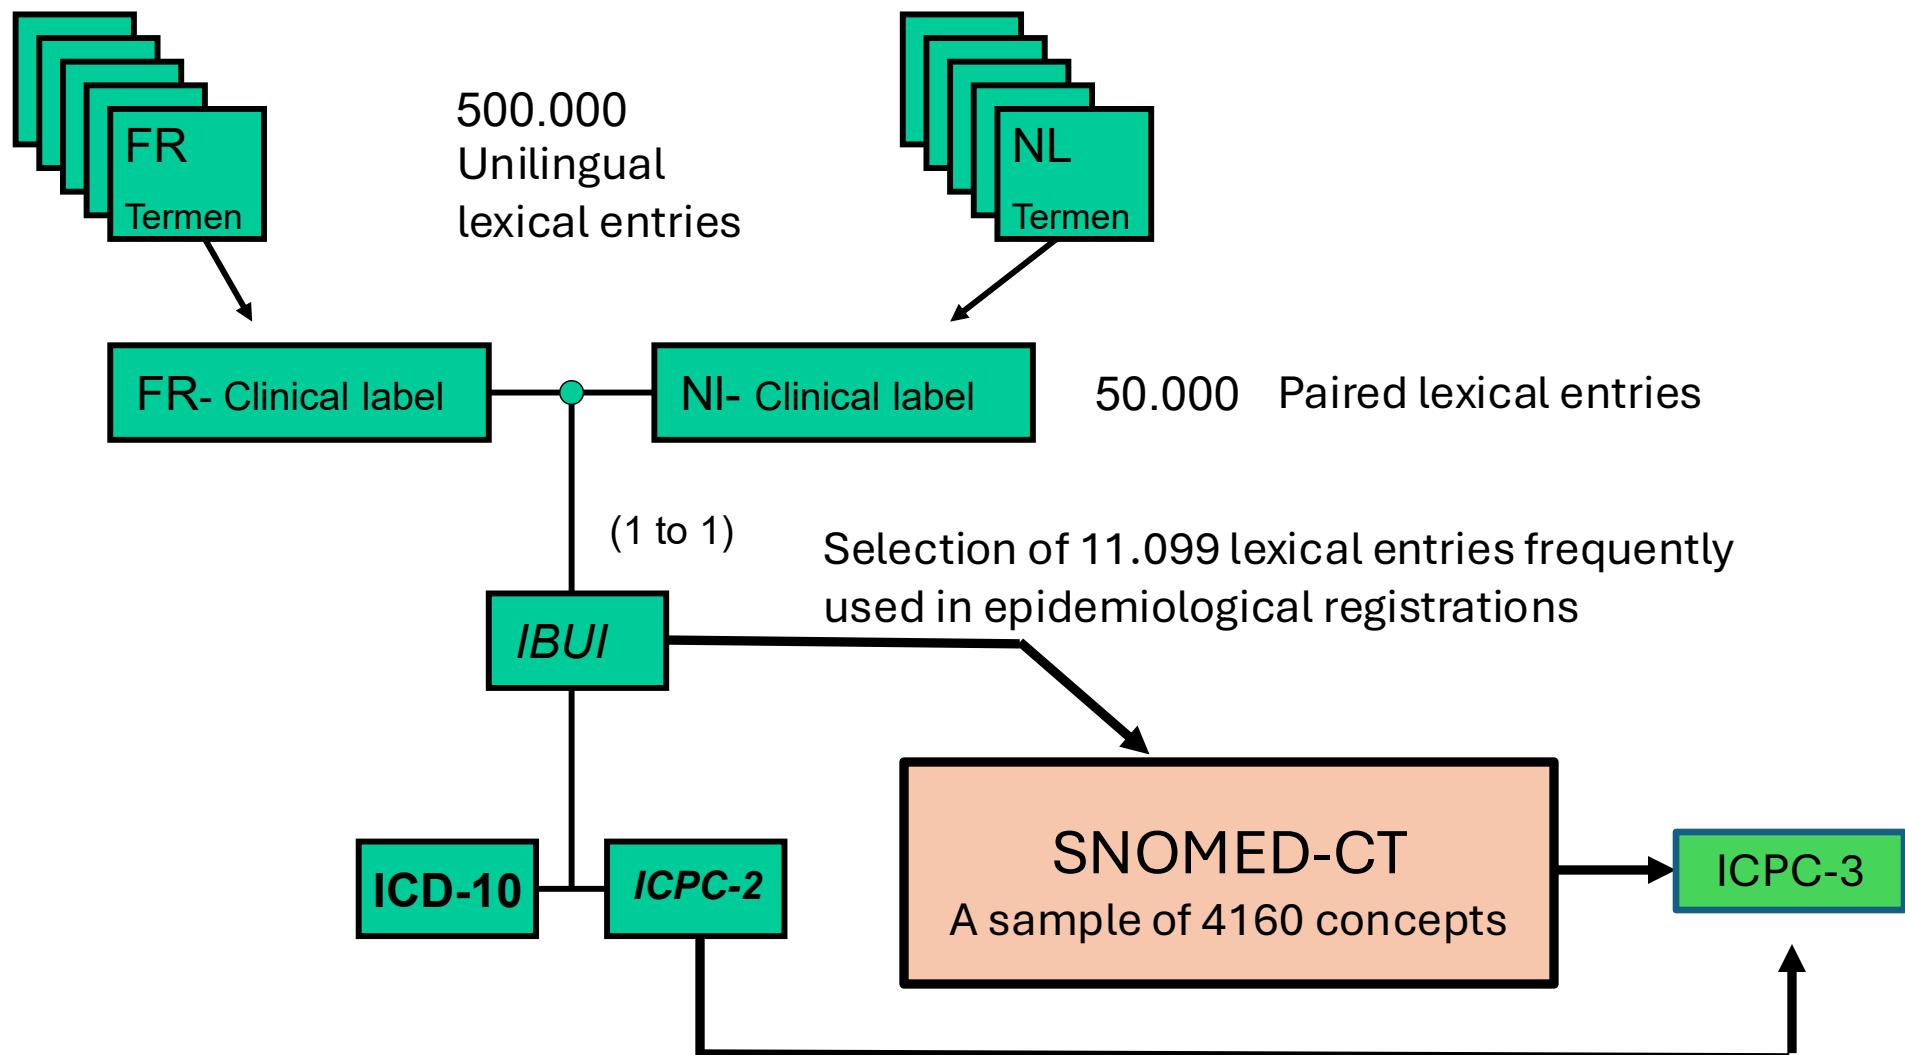

- SCT Refset: **Activity of Daily Living** related to physical function findings
- **1.108** SCT concepts

ICHI

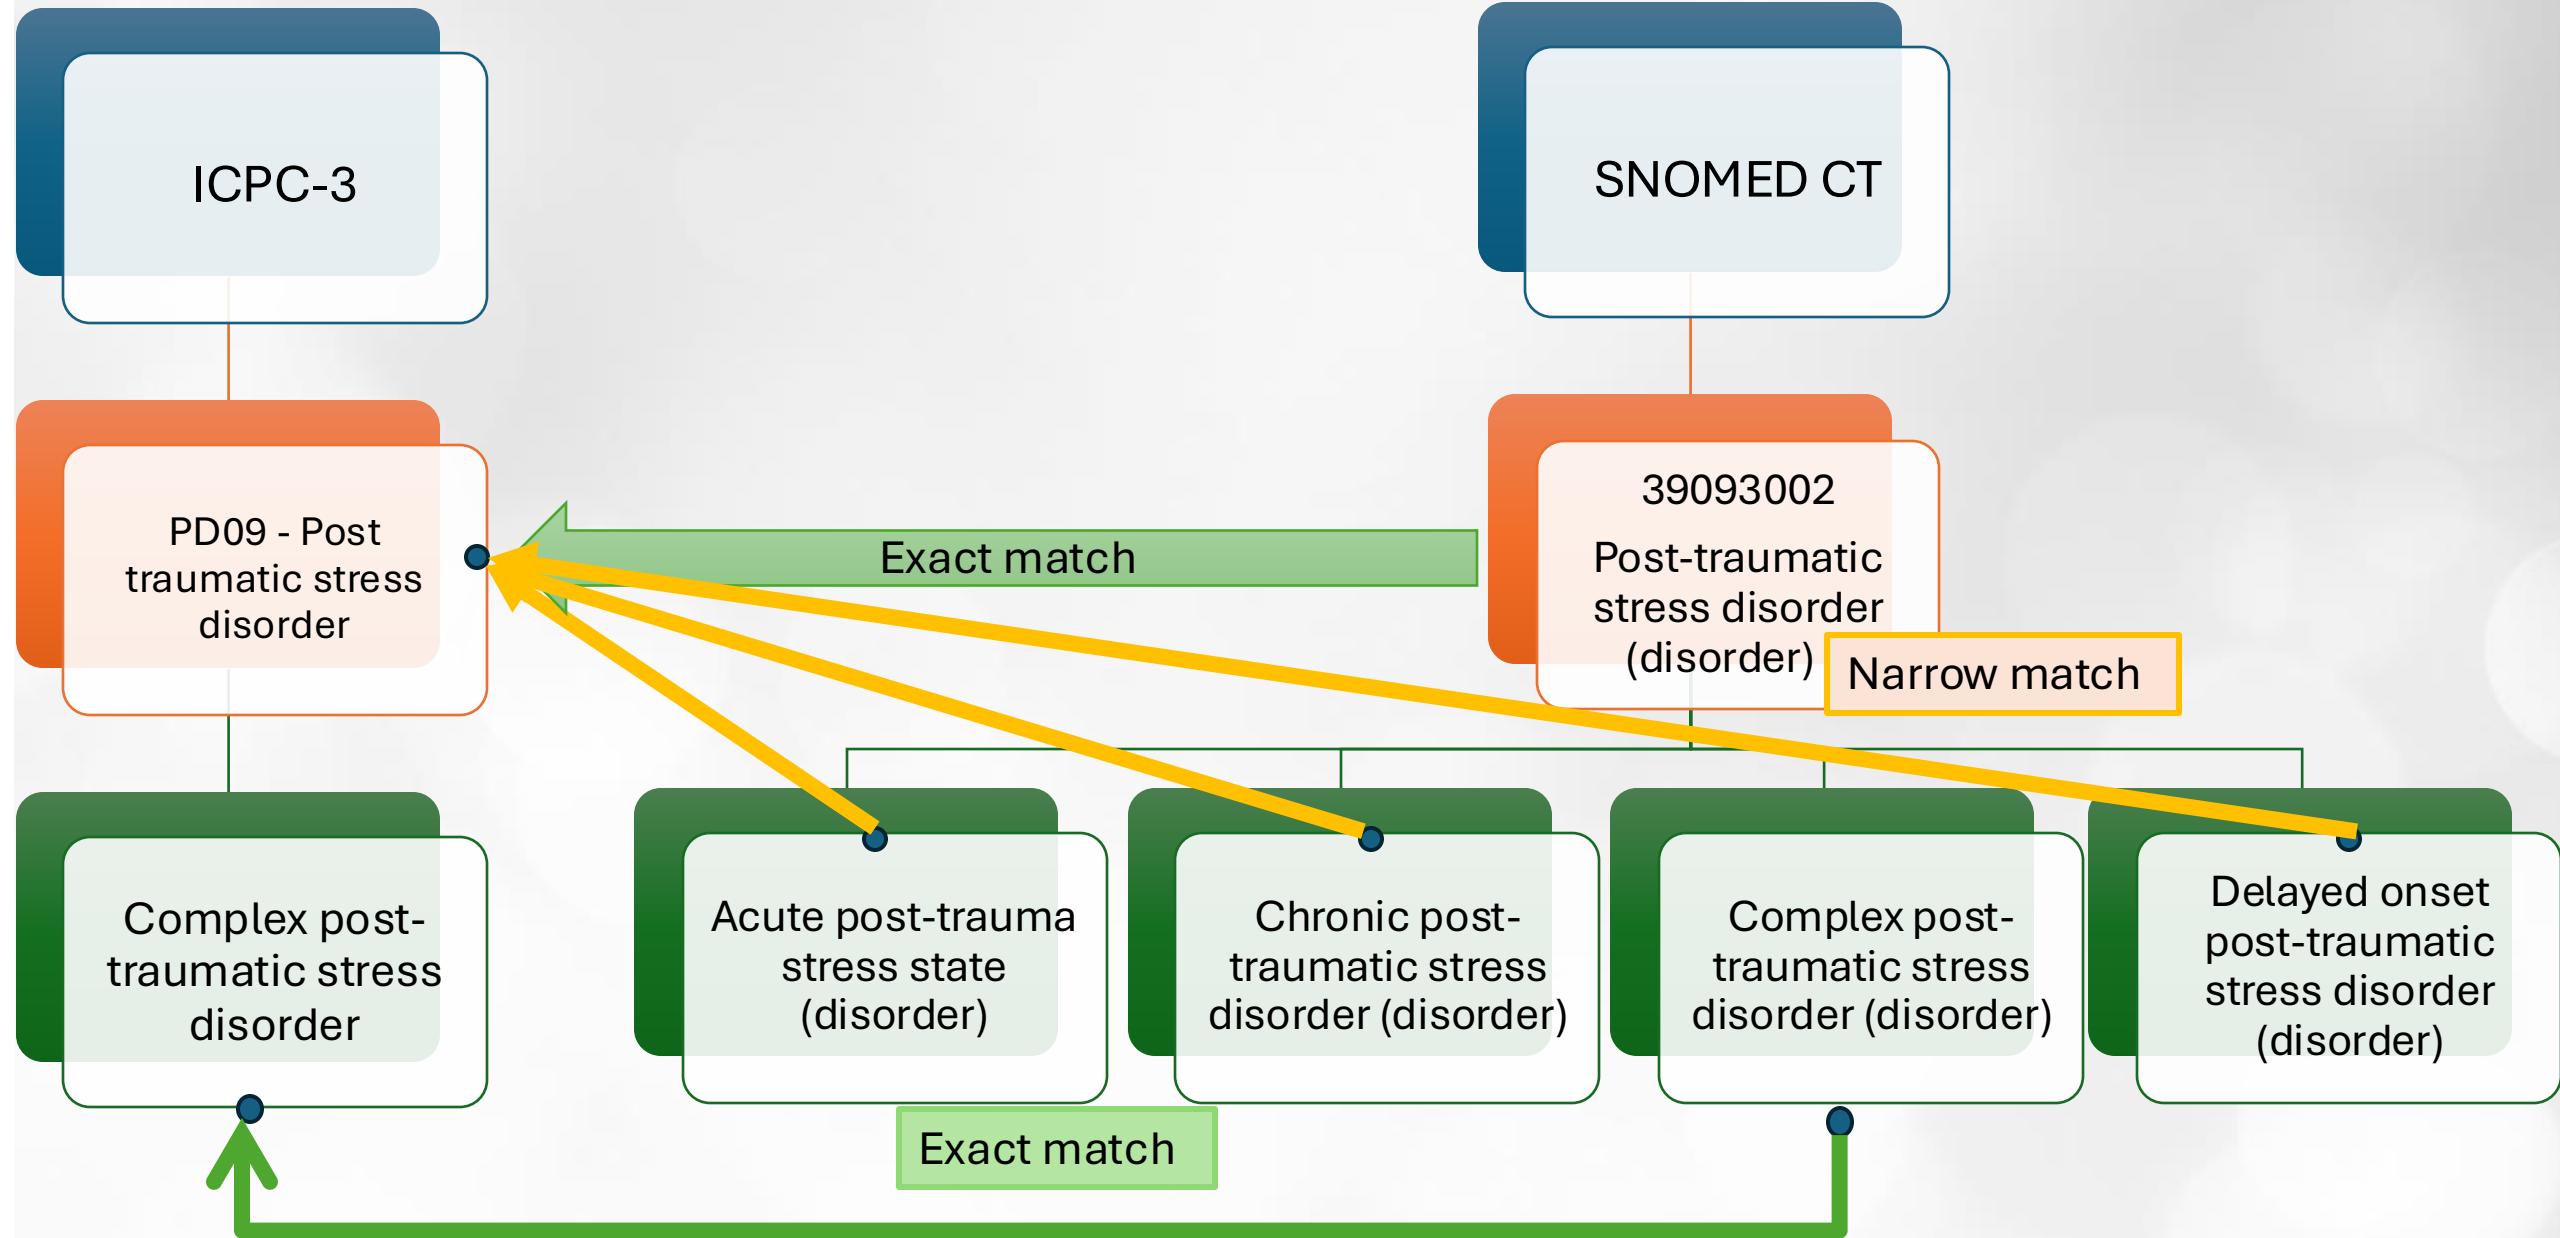

- National Library of Medicine **ICD-9-CM Procedure** Codes to SNOMED CT Map
- **2.528** SCT concepts

Methodology for each of the classifications and preliminary results

ICPC-3 source set - The Belgian Bilingual Biclassified Thesaurus (3BT)

Results ICPC-3

ICF methodology and preliminary results

- Starting from the UK Activities of Daily Living (ADL) core set (N=1.108)
- Trying out several approaches to mapping to the codes of ICF
 - String search
 - Fuzzy search
 - Business rules
- Acknowledging that the mapping from SCT to ICF is not straightforward
 - SCT often precoordinates its functionality concepts, while ICF has activities, modulated by qualifiers (capacity and performance)
- Hence, preparatory work was needed to parse the Precoordinated SCT functionality concepts into activities and capacity or performance qualifiers.
- This allowed to solve the alignment of most of the ADL SCT core set codes with activities+qualifier

Results ICF

Examples;
SCT-concepts

Does not ride a bicycle (finding) | SCTID:
300649009

Difficulty performing gardening activities (finding)
SCTID: 300754006

Difficulty walking (finding) |
SCTID: 719232003

ICHI activities with qualifiers

| Qualifier mapping | Subject mapping |
|-----------------------|----------------------|
| Does not | Ride a bicycle |
| Difficulty performing | Gardening activities |
| Able with difficulty | To walk |

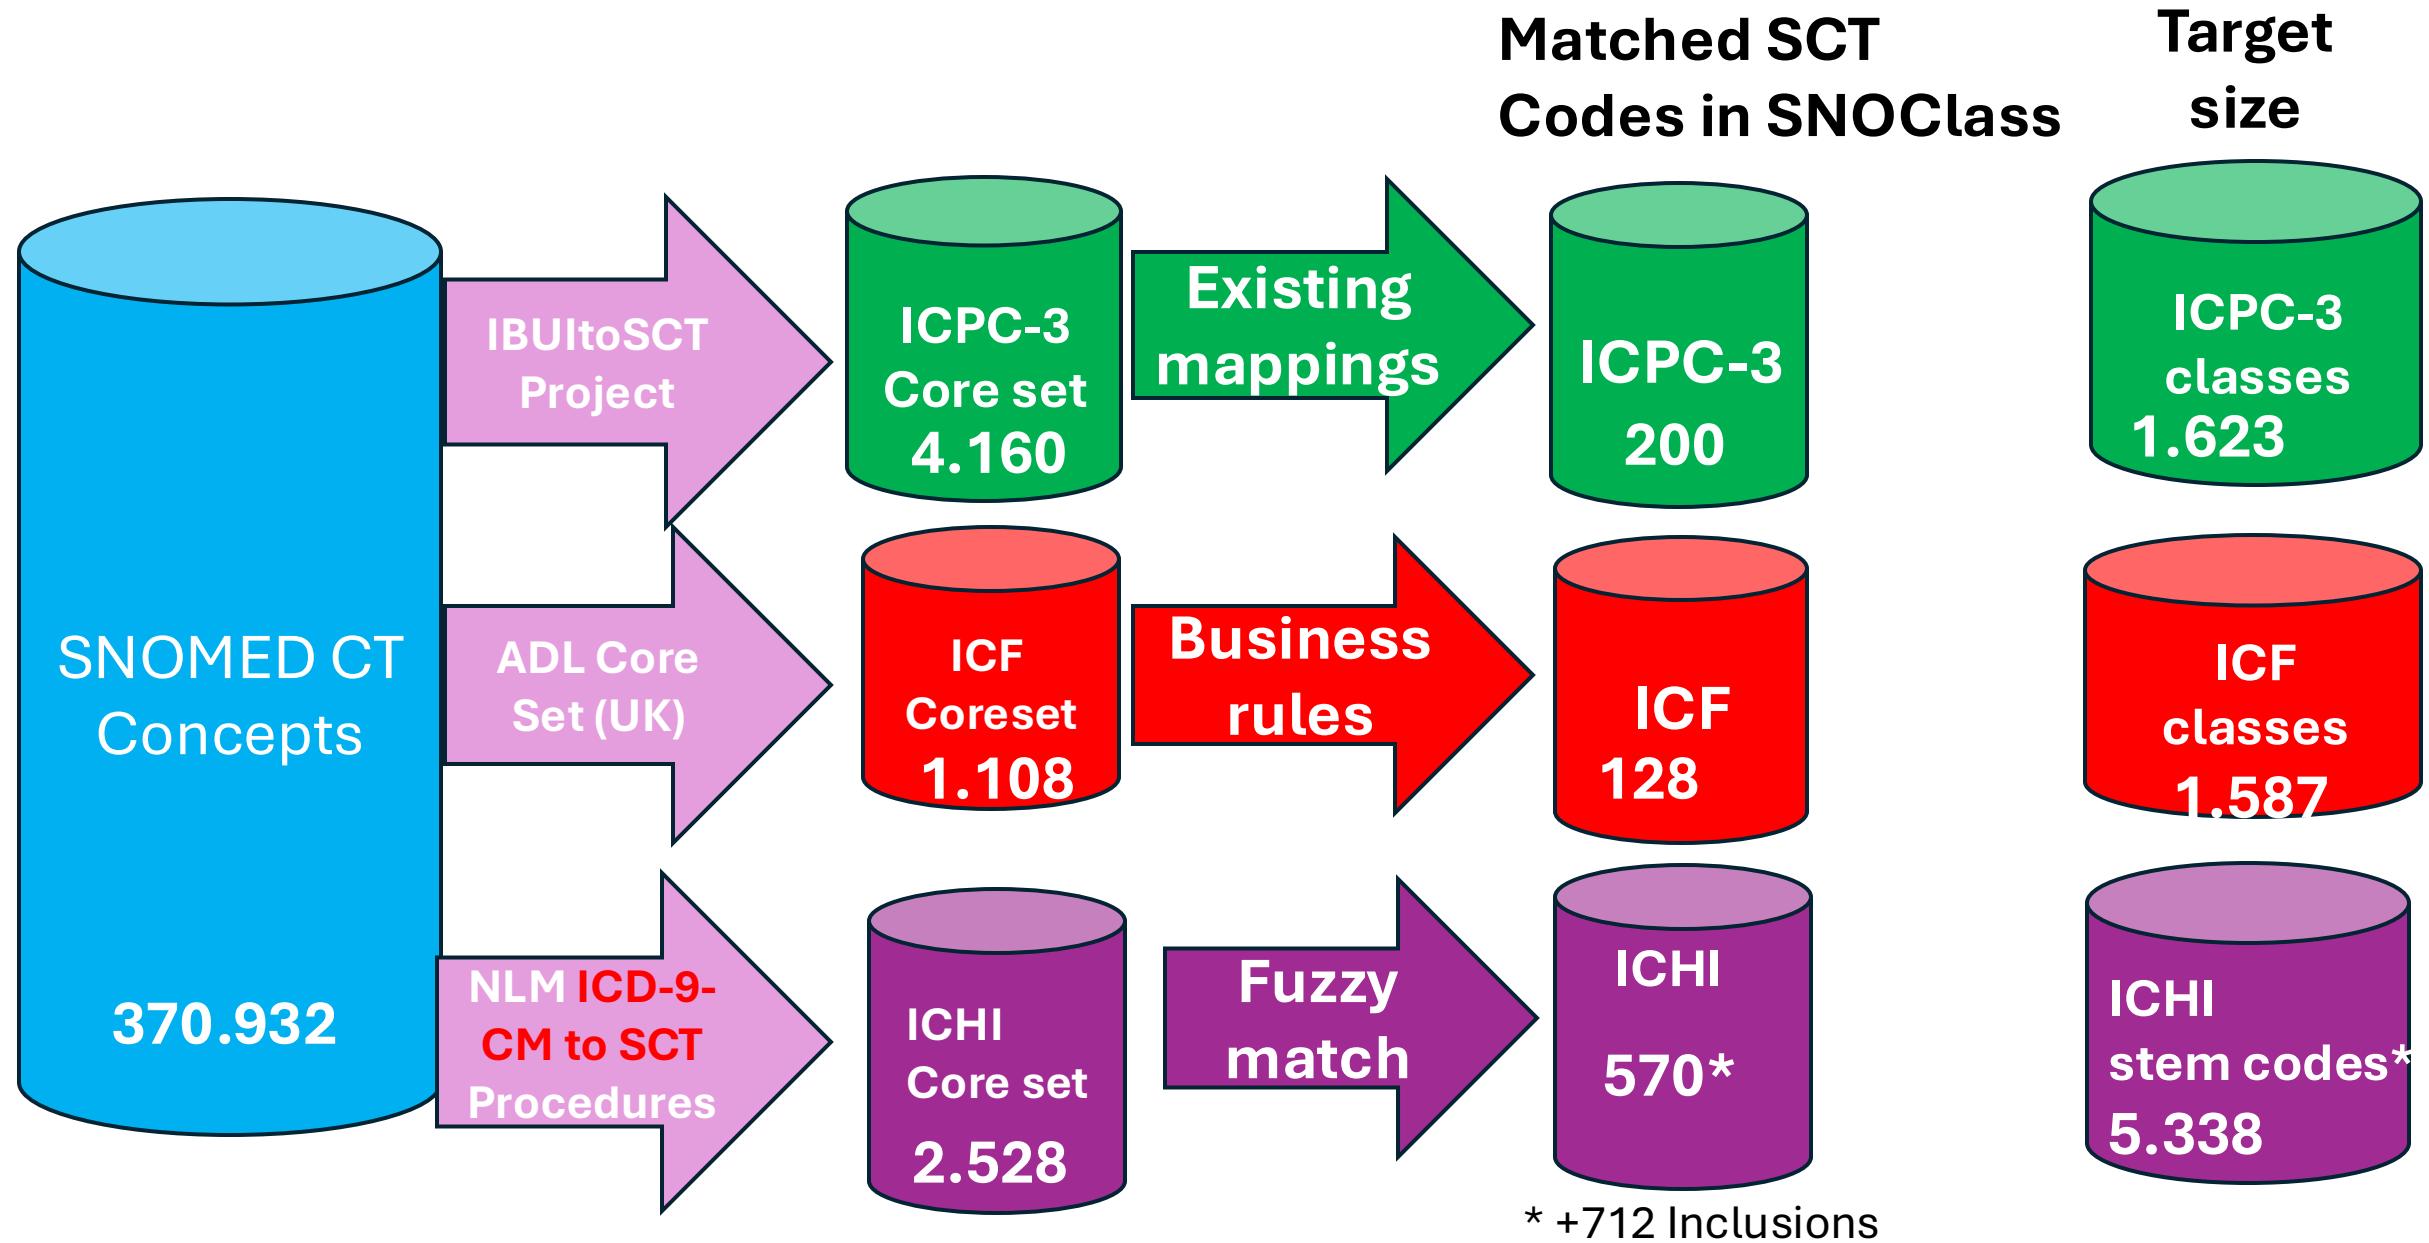

See e-poster!

More details to discuss

ICHI: Automated lexical matches between SCT Fully Specified Name (FSN) and ICHI stem code labels with Whoosh Python library = ‘fuzzy match’

- Starting with Exact lexical string matches
- Expanding with “Fuzzy Matches” with decreasing probability of match
- Using AND approaches and OR approaches for multi component terms
- Setting a lower limit of probability score to exclude unlikely matches
- Manual checking by human expert

Source and Target Size per domain

Simple Standard for Sharing Ontological Mappings (SSSOM) output

Subject ID and Object ID: source and target ontology terms

Predicate ID: relationship type (e.g., exact, broader, or narrower)

Justification: method used (e.g., lexical match or manual curation)

Provenance: origin of the mapping (contributor, creation date, and mapping tool used)
